

## Publish Data to IBM Cloud

|              |   |
|--------------|---|
| Team ID      | PNT2022TMID44517                                      |
| Project Name | Smart waste management system for metropolitan cities |

Step 1: In the python script give the IBM credentials like org id, device type, etc. to connect to IBM cloud

Step2: Open your cloud account and open Watson platform

Step 3: In the specified Device Type mentioned in python script shows connected

Step4: Then click on Recent Events and observe the Output data

## Screenshot:

The screenshot displays the IBM Watson IoT Platform interface. On the left is a dark sidebar with navigation icons. The main content area is divided into several sections:

- Recent Events:** A table showing live data streams. It has columns for Event, Value, Format, and Last Received. Two events are listed, both from an IoTSensor in JSON format, received a few seconds ago.
- State:** A section indicating 'Showing Raw Data | No Interfaces Available'. It contains a table with columns for Property, Value, Type, Event, and Last Received. Two data points are shown: 'dist' with value 47 and 'load' with value 12, both from an IoTSensor.
- Device Information:** A section at the bottom for viewing basic device information, including a button to 'Edit Device Information'.
